

Community College

The Community College Program is looking for students who want to lead and establish new Health Corps chapters at community colleges in San Diego. Grossmont College, located in the city of El Cajon (East County) of San Diego is where the first chapter will be started.

Members will be able to participate in every aspect of this chapter by commuting to the community college to recruit members through various publicity events, creating and implementing projects to gain volunteer and educational experience, and networking beyond UCSD to build relationships with outside agencies, community college students, faculty members, professors, and more. Members have the creative advantage of molding each new chapter to the group's interest.

High School Mentorship

The High School Mentorship Program helps mentor, educate, inform, and provide opportunities for disadvantaged high school students who are interested in becoming a part of the health community. Student volunteers will actively be on the high school campuses promoting health education and professions.

Amé

Medical Translation

The Medical Translation Program aims to match student volunteers with local community health centers to provide language translation for patients who do not speak English. Students who are a part of this program ease the language barrier that many San Diego patients face in the health centers.

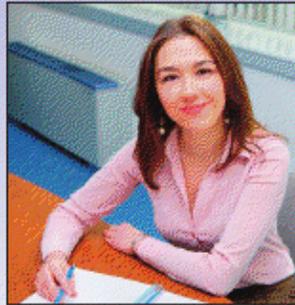

Becoming a member of the Medical Translation Program, you interact with patients and healthcare professionals, gaining valuable experience and fostering diverse relationships built upon trust and understanding.

Patient Assistance Program

The Patient Assistance Program (PAP) works with the staff at clinics and hospitals to assist patients who cannot afford their medications or have insurance.

This program saves the clinics or hospitals hundreds of thousands of dollars annually. Volunteers arrange to get medications through this program for underserved patients in San Diego by completing an extensive amount of paperwork for each patient enrolled in the program. While volunteering in this program, students can work side-by-side with health professionals, such as nurses, physicians, and pharmacists.

Health Screenings

The Health Screenings sector aims to help the members of the underserved communities by providing volunteers to local clinics and health agencies to work alongside health care professionals and provide direct patient care.

Each site will have its unique set of volunteer requirements. Some sites may have longer time commitments than others and require particular training (such as CPR certification or background checks). There will be a site available to fit each volunteer's interests, skills and schedules.
